

# Manage your international networks efficiently.

## Global Solutions from Bell

Implementing and managing a global communications network is complicated, involves multiple carriers, contacts, billing platforms, cultures and languages.

At Bell, we are committed to helping you grow internationally. We offer powerful solutions that simplify the way our customers do business worldwide, while limiting upfront investment and risk.

### Extensive coverage

Global Solutions from Bell extend your domestic networks to more than 100 countries by providing flexible, scalable, secure and robust connectivity.

### The Global Solutions portfolio

By offering a mix of global and regional providers, the solution utilizes the closest available point of presence (POP) which optimizes network costs for our clients.

The Global Solutions portfolio includes:

- IP VPN service
- Global Private Line
- Global Business Internet
- Global Frame Relay/ATM
- Global Toll Free

You can take advantage of Bell's global solutions connectivity at bandwidth ranging from 56Kbps to OC48. We offer both VPN Internet based and private IP VPN MPLS managed services to meet a variety of networking needs.

We also offer International Broadcast Services and a wide range of International Long Distance services for all your voice communication requirements. These include Outbound, Toll Free, Wireless, Calling Card and Canada Direct solutions.

Conducting business worldwide becomes simple and cost-effective.

### Benefits

**Trusted single point of contact** – Bell delivers the convenience of a single point of contact for ordering, provisioning, country coordination, project management,

billing, network management and support. This consolidated approach simplifies the implementation of a global network, reducing your overall costs and maximizing their return on investment (ROI). In addition, Bell provides full accountability for the complete end-to-end implementation.

**Dedicated technical expertise** – The Bell Global Sales and Solutions team has extensive expertise delivering cost effective and scalable global solutions. We assess which of our global carrier partners and technology systems are appropriate for your international strategies.

**Reliable network management** – With more than 20 years of international network management experience in a wide range of technologies, our Global Network Management Centre expertly manages all processes, including provisioning, change management, fault and performance management.

**Customer-focused service** – Bell technical expertise is available when our customers need it 24/7. Combined with high levels of service, our solutions allow our customers to focus on their core business.

**World-class innovation and quality** – Bell is continuously investing in new technologies and evolving our solutions to meet your evolving needs.
