

Reduce operational risk and infrastructure management requirements.

Managed Hosting service from Bell

With the growing number of risks to ICT (information and communications technology) infrastructure resources, efficient and effective maintenance and management are more critical than ever. As hardware and applications become increasingly sophisticated, many enterprises are turning to industry partners to provide the infrastructure resources and technology expertise needed to keep pace with business demands.

Solution

Managed Hosting service from Bell is the ideal option for businesses that would like to improve their system efficiency and security, and ensure uptime of their ICT infrastructure without having to invest extensively in the provisioning and managing of their own ICT infrastructure. With Managed Hosting, we supply and implement the dedicated servers, networking equipment, and software necessary for your business operations, and manage their ongoing performance. You enjoy all the advantages offered by a fully-redundant and secure data centre infrastructure environment, as well as 24/7 access to industry-leading experts for managing server hardware, bandwidth, back-up, security, databases and other software applications.

Features

As each business has its own operational and technical requirements, our service can be easily tailored to suit your specific needs and budgets. Service features include:

- Server, network, and software installation and configuration
- 24/7 network, server and application monitoring and management
- 24/7 server and application technical support

- Complete data back-up and storage management
- Management of software-license compliance and software patches with proactive, scheduled maintenance
- Ongoing tracking and monthly reports
- Service level agreements for O/S and application uptime

Benefits

- Reduce operational risk by ensuring 24/7 availability and uptime for business systems
- Reduce the complexity and cost of regulatory compliance
- Provide full scalability for current and future needs
- Free infrastructure management resources to focus on revenue-generating initiatives
- Ensure IT systems are optimized for peak performance
- Reduce or eliminate upfront hardware and software purchase costs and license management
- Maximize return on current technology investments
