

Optimize network performance with less complexity and reduced cost.

Wireless Managed services from Bell

More and more enterprise rely on wireless communications to compete effectively and support employee productivity. Keeping wireless networks secure and performing at top speed without sacrificing performance and convenience can be time consuming and requires in-depth expertise.

The solution

Wireless Managed services include integrated monitoring, troubleshooting, technical support and network capacity planning to manage your WLAN environments from end to end. Designed with flexibility in mind, these can be customized to meet specific WLAN requirements and budgets. They include:

1. Managed Wireless LAN service - provides 24/7 monitoring of every network element including controllers and access points to ensure WLAN security, reliability and reduced downtime. You have single point-of-access to industry leading tools and network expertise to help manage day-to-day administration activities. These include monitoring, troubleshooting, support and network capacity planning.
2. Managed Guest Network Access - provides you with a completely self-provisioning, managed Wi-Fi hotspot wireless service. It enables on-the-go high speed Internet access via a standard Web interface. Self-detecting network access eliminates the need for software installation or reconfiguration of settings.

Benefits

- Reduce the cost, complexity and labour of maintaining your wireless infrastructure resources in-house
- Reduce risk by ensuring that critical wireless technology systems are current, effective and secure at all times
- Improve detection and problem resolution
- Reduce chronic network problems
- Maximize long-term network performance
- Increase connectivity for mobile workers with Managed Guest Network Access
- Ensure safe, secure access to wireless services
- Improve quality of service for mission-critical applications and processes
- Ensure the security, reliability and resiliency of your network with a single point of contact for scalable and customizable services
- Assistance with PCI compliance
